## TECHNOLOGIES

**Pentagrip Vibram** fuel and oil resistant outsole with fire resistant properties up to 300oC. Vibram® is the world leader in high performance rubber soles, combining quality, innovation and the best components for their specific use. Their outsoles are produced with three objectives; to guarantee the best performance, the maximum level of comfort and long lasting quality.

Highly breathable knit constructions engineered for enhanced abrasion and snagging resistance, the CORDURA® AFT fabric range includes high tenacity polyester 3D spacer fabrics and high tenacity nylon 6,6 mesh that can be foam or felt laminated for outer shell footwear applications.

Magnum's own M2 technology stands for increased strength, durability and protection. Add it to the Ortholite Impressions slow recovery foam and the LAVA XL mineral based odour control technology, and you have the ultimate comfortable, moisture wicking, customizable sockliner. The EVA moulded shell provides you with additional underfoot cushioning, while the heel cradle wraps the sides for support. With the LAVA XL self-generating mineral based odour control technology and a moisture wicking top layer, this sockliner will keep your feet fresh and dry.

High performance Michelin rubber outsoles give you ultimate traction, durability, flexibility and adaptability on multi-surface terrain.
